suajmahajan2122@gmail.com — +91 9056170453  
GitHub: github.com/Rkrocks2468 — LeetCode: leetcode.com/u/sujal2122

## Summary

Computer Science student with 700+ LeetCode problems solved (Top 7%), strong in C++, DSA, and DBMS. Developed scalable client-server applications and Chrome extensions using core CS concepts. Experienced with Git, SQL, and socket programming. Eager to contribute to performance-focused backend systems.

## Technical Skills

**Core Areas:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems

**Languages:** C++, C, Python, JavaScript

**Competitive Programming:** LeetCode – 700+ problems solved, Top 7% globally

**Web Development:** HTML, CSS, JavaScript

**Databases:** SQL, Firebase Realtime DB

**Tools:** Git, GitHub, VS Code

## Education

**B.Tech in Information Technology**, NIT Jalandhar

Jul 2023 – Present

CGPA: 7.88 (Till 5th Semester)

**Class XII – Non-Medical**, Shri Guru Ram Rai Public School

2023

Score: 93.6%

## Projects

**SmartComplaint Hub – Complaint Management System**

React, Node.js, Express, MongoDB

GitHub: smartcomplaint

- Built a full-stack complaint portal enabling students to log room-related issues and admins to manage them.
- Integrated secure JWT-based login/registration with route protection and role-based access (admin/user).
- Enabled real-time complaint submission, tracking, and filtering via RESTful APIs and MongoDB backend.
- Designed admin dashboard with status filters, ensuring efficient resolution workflows.
- Optimized API latency and implemented persistent login via local storage for better UX.

**Leads Extension – Chrome Tool**

JavaScript, HTML, CSS

GitHub: leads-extension-

- Developed a Chrome extension with persistent URL save/load using local storage.
- Created an interactive popup UI with batch-clear and one-click-save; enhanced UX for 100+ users.
- Refined storage logic, reducing retrieval time by 30% and improving responsiveness.
- Introduced dark mode and preference saving, increasing accessibility for 30% of users.
- Incorporated user feedback to redesign flow and lower bounce rate by 25%.

**Client-Server Academia – Networking Tool**

C, Socket Programming

GitHub: client-server-academia

- Engineered a TCP-based system for messaging and file transfer, supporting 10+ concurrent clients.
- Optimized throughput by 35% through context switch minimization and refactored logic.
- Reduced response time by 20% using buffered I/O and event-driven communication.
- Implemented command logging to track session activity and debug critical issues.
- Designed fault-tolerant reconnect logic to enable file resumption after drops.

## Coding and Competitions

- Solved 700+ LeetCode problems with strengths in arrays, trees, graphs, and DP.
- Ranked in Top 7% of LeetCode contests with 1000+ participants.
- Completed “100 Days of Code” challenge focused on C++, recursion, and STL mastery.
- Simulated 30+ mock interviews to improve time-bound accuracy and analytical speed.
- Co-led DSA contests for 100+ peers as part of the campus coding initiative.

## Relevant Coursework

- Data Structures and Algorithms, Object-Oriented Programming with C++
- Operating Systems, Database Management Systems, Computer Networks
- Applied OS and DBMS concepts to simulate multi-threaded task queues and SQL schemas.

## Experience

---

### Software Engineering Intern, Visa

May 2026 – Present Bengaluru, India

- Developing and maintaining backend services using Spring Boot and Java in a large-scale enterprise environment.
- Designing and implementing RESTful APIs to support internal applications and business workflows.
- Collaborating with senior engineers to debug issues, improve code quality, and optimize application performance.
- Writing unit and integration tests to ensure reliability and maintainability of backend services.
- Working with Git-based development workflows, code reviews, and agile software development practices.
